RECOSMICISE

recovering of (non-colonial) cosmology, a moral and meaningful order of things, as the coloniser destroys the cosmos of the colonised peoples. 'recosmicising' doesn't mean giving some mystique back to the stars and cosmos, or giving technology a mystical meaning,

but rather understanding that we must develop ways of life that solve the conflict between modern science and tradition, between technology and mysticism – whether we choose to talk about the chinese *dao* or heidegger's *sein*. we must give the non-rational a place in a culture that is otherwise rational – the way, for example, that poetry gives the unknown a place in communication through an unconventional and paradoxical use of

language. art and philosophy can't choose science as their point of departure. if they do, they become footnotes to positivism. they should not abandon science either, but rather tend to it and show the way to other modes of understanding the world. to paraphrase georges canguilhem, we must return technology to life (hui 2019)

TECHNODIVERSITY – BEYOND DATAFICATION AND DIGITAL COLONIALISM

our lives are subject to processes of datafication through which big tech companies and governments extract data from us for profit or social and political control. the material thus collected is fed into the algorithms and artificial intelligence trained to monitor human behaviour. in digital capitalism, or 'data colonialism' life is appropriated as a resource and managed and traded in the form of data. this not only perpetuates existing

inequality and discrimination, but also leads to new injustices and power imbalances. how can we resist data colonialism and produce alternative technologies?

the concept of technodiversity can provide insights that cannot be reduced to capitalist extraction. technodiversity recognises that technologies are temporally and spatially produced by different knowledge systems, ideologies, political interests, economic forces

and cultural practices. this liberating perspective can create space for collectives, peoples and identities to produce and control their own data – no data, small data, indigenous data, more-than-human data, feminist data, queer data – and not be governed by BIG DATA and oppressive algorithms.

to safeguard subjectivity and the unmediated self, we must rethink our relationships with data, defying the

extractive logic of contemporary data regimes. from the intersections of bodies, identities, digital technologies, artistic practices and activism, we can envision a data agency that is embodied and potentially subversive.
